For the application that Photoshop is, there's really no interface in the sense of a traditional UI. The live-updating Layers are on the left of the interface, a list of the tools on the right. The standard tools are shown in the same color as the tool bar. Layer and Path tools are shown in red, for example, as are the Shape tools, the Clone Stamp, the Watermark, the Lens Correction, and others. Different colors are used to show where different tools are available for use. The ability to cut, copy, paste, or rotate is always shown in orange in the standard tool bar. By contrast, the sliding toolbar is only available to more experienced users or users who have set Photoshop to install the Toolbox panel by default. These tools are displayed in a color other than red and yellow, such as blue. The tools include the Cut, Copy, Paste, Rotate/Flip, and Arrange tools. These are always indicated in a blue color to differentiate them from the tools you find on the standard tool bar. One of the issues with both the standard tool bar and the sliding tool bar is that they don't want to stick to the screen. They always want to reclaim their portion of the screen so that you can see the previous tool. In fact, the Toolbox does a better job of staying put—at least for a little bit. You can Pan/Zoom the selected image within this workspace, which is a nice way to see the rest of your image. (You can use the zoom tool there, too.) You can arrange and rearrange the tools here, too. The only thing you can't do is invoke the sliding toolbar without first activating it.
