“Adobe’s mission is to help our customers realize their vision, and this year’s MAX event in Las Vegas has continued to expand our innovative approach to creative content,” said Sidhartha Srinivas, vice president of emerging technologies at Adobe. “Among the highlights are breakthrough innovations including Wavelet tools for improved clarity, edge-detection technology that ensures seamless blending across surfaces and an improved Clone tool to analyze content and make adjustments in one single pass.” “We continue to learn from our customers and focus on delivering the most intuitive and seamless enhancements possible,” said Srinivas. Adobe has given Photoshop a set of simple tools that remove the need to do multiple, tedious tasks such as resizing and redrawing an image while it’s being edited. Simply use the new Image - Adjustment - Crop - Resize or Image - Resize Slideshow tools to trim and resize images without losing the quality of your original content. This new crop and resize feature in Photoshop also helps give users a choice as to whether they want to keep their original pixels as they go through transitions in the slideshow, and an option to decide how many pixels they want to keep. The new tool also makes it easy to quickly move an image for resizing or morphing purposes. Adobe is expected to push Photoshop to greater numbers of creative users by adding more design-oriented features to the popular editing software. This includes innovative improvements to the way tools, windows and menus look. The company has set a goal to create a more lightweight Photoshop experience that is a joy to use.
